Angry Panda project aims to protect investors from the inherent risks in investing in a cryptocurrency, guaranteeing almost the whole value paid for its coins. In addition to giving greater security and confidence to investors, it is designed to facilitate and encourage the daily use of cryptocurrencies providing fast, cheap and secure ways to send payments.

Angry Panda supports the price of all its tokens through a repurchase system in USD/EUR. In this way it guarantees the value of your tokens and investments during down trends and bear markets. Specifically we guarantee a rebuy of:

- XPAND at 1,000\$
- UBEAR at 1\$
- EBEAR at 1€
- ROAR at 95% of the price, only if bought during PRE-ICO or ICO phase.

Also our investors are free to trade Angry Panda tokens vs any other token present on Waves DEX without any limit of price. As a result, it is both possible to trade to make profits and, above all, to be more protected against loss of value, mostly during down trends and bear markets.
